

NAME

rrdupdate – set up rrd database for rrdmon

SYNOPSIS

rrupdate [configuration]

DESCRIPTION

The **rrdupdate(8)** updates the RRD database for an rrdmon configuration or for a set of such configurations. The databases must be set up using **rrdsetup(8)** previously.

Most users will want to run **rrdupdate(8)** from cron without any arguments to automatically update all the databases configured. This is achieved if the file */usr/local/rrd/etc/update* exists, because then the configurations from that file are all updated.

FILES

/usr/local/rrd/etc/update

SEE ALSO

rrdcgi(8), **rrdsetup(8)**, **rrdinstances(8)**
